Contents of the package

The heat sink set for Goldeye cameras consists of:
- the heat sink with attached thermal interface pad
- four M4 bolts
- assembly tool T20.

Applicable for:
The heat sink set may be used with all Goldeye standard models.

Installation of the heat sink

The heat sink can be installed to each of the four sides of the camera: top, right, left or bottom.

To install the heat sink to the camera, follow the steps below. Multiple heat sinks can be attached at the same time.

1. Remove the protection film from the thermal interface pad.
2. Accurately place the heat sink on the desired side of the camera.
   - Ensure the slotted holes (see circles in Figure 1) point to the back side of the camera.
   - Place the heat sink directly into the right position.
   - Since the thermal interface pad will adhere to the camera, it is not possible to move the heat sink along the camera surface.
3. Fasten the heat sink to the camera using the M4 bolts and the enclosed assembly tool. Be careful not to over-tighten the bolts.
